

**City of Utica**  
**Genesee Street, Oneida Square to Jewett Place**  
**Temporary Complete Streets Project**

**PROJECT DESCRIPTION:**

Genesee St. from Noyes St to Jewett Place is in the process of being repaved. Preparations for the installation of the finishing top coat of asphalt are well underway. This is a very opportunistic window to do a **temporary** “Pop-Up” restriping tryout using Complete Streets principals. Genesee St pop-up will have a wider driving lane, turning lanes at intersections, wider parking spaces and a separated bike lane. An on-line or in-person survey will be available in order to get constituent feedback.

**PROJECT MATERIALS:**

- Chalk Striping Paint
- Regular Striping Paint
- Plastic Traffic Cones
- Plastic Traffic Delineators

**PROJECT TEAM:**

- City of Utica Engineering/DPW
- Utica Complete Streets Work Group
- AmeriCorps
- MVCC Civil Engineering Students

**PROJECT OBJECTIVE:**

**Short Term Objective;**

A temporary tryout of a Complete Street concept.

**Long Term Objective;**

If this is successful and beneficial to the users, a permanent striping change to make this section of Genesee St a permanent complete street may be implemented. This change would complement and extend the potential future DRI complete streets project.
